

# SF Organics 2-5-0

Phosphorous is one of the key elements in crop/plant life –it is a limiting nutrient.

As phosphorous becomes unavailable in soil that tests outside of the pH range 6.0-7.0 this causes only 1/3 of all phosphorous to be plant-readily available at a time.

SF Organics 2-5-0 has been created using phosphoric acid as the stabilizer which provides the extra phosphorous many types of damaged soil require.

## Benefits:

- Biologically Alive
- Fish Hydrolysate
- Aids in increased cell division (plant growth)
- Aids in plant respiration(how quickly/efficiently energy transfer occurs)
- Aids in photosynthesis production (plant energy creation)
- Aids in energy storage and transfer(sugars, proteins, enzymes, etc.)

Also provides all basic benefits found with SF Organics
